*IMANTODES TENUISSIMUS* Cope

The Museum has two specimens, both from "Yucatán," including the type (No. 6563) and a toptype (No. 24889).

**LAMPROPELTIS ALTERNA** (Brown)

A single specimen (No. 110819) is from near Saltillo, Coahuila. The Museum has no others of the species.

**LAMPROPELTIS GETULUS SPLENDIDA** (Baird and Girard)

Three specimens (Nos. 104662-4) are from Río Santa María, near Progreso, Chihuahua. All are females, with 23-23-19 scale rows, 7-7 supralabials, 1-1 preoculars, 2-2 postoculars, and two primary temporals; ventrals 213, 213, 219, and caudals 40, 46, 48, respectively. The Museum has no other Mexican specimens.

*LAMPROPELTIS GETULUS YUMENESIS* Blanchard

A single specimen in the Museum (No. 21720) is from Santo Domingo, Sonora.\(^{45}\)

*LAMPROPELTIS PYROMELANA* (Cope)

A single specimen in the Museum is from Dist. Guerrero, Chihuahua (No. 40063).\(^{46}\)

\(^{44}\) Cope, 1867b, pp. 317-318.
\(^{45}\) Blanchard, 1921, p. 74.
\(^{46}\) Blanchard, 1921, p. 235.
A single specimen, the type (No. 46558), is in the Museum, from Pátzcuaro, Michoacán.\(^{47}\)

*LAMPROPELTIS TRIANGULUM ANNULATA* Kennicott

Three specimens are in the Museum, including No. 425 from “Mexico,” No. 1845 from Monterrey, Nuevo León, and No. 37535 from Montemorelos, Nuevo León.\(^{48}\)

*LAMPROPELTIS TRIANGULUM ARCIFERA* (Werner)

One specimen (No. 110823) is from the city golf links of Orizaba, Veracruz (presented by friends). It is a male; scale rows 21–21–17; ventrals 223; caudals 55; supralabials 7–7; infralabials 8–8; preoculars 1–1; postoculars 2–2; temporals 2–3; white bands (including nuchal) 28.

The Museum has three others: One from Orizaba, Veracruz (No. 30222), the others from “Mexico” (Nos. 1854, 32278).

*LAMPROPELTIS TRIANGULUM NELSONI* Blanchard

Ten specimens are in the Museum, including: Nos. 31492–4, Colima; No. 12680, Guanajuato; No. 46552, Acámbaro, Guanajuato (type); Nos. 24967–8, Guadalajara, Jalisco; No. 31491, Neshpa River, Sierra Madre, Michoacán; and Nos. 30504–5, “Mexican Plateau.”\(^{49}\)

*LAMPROPELTIS TRIANGULUM OLIGOZONA* (Bocourt)

Two specimens (Smith, 1942d, pp. 201–202) are in the Museum: One (No. 46439) is from Huehuétan, Chiapas, and the other (No. 62210) lacks precise locality data (collected by Sumichrast).

*LAMPROPELTIS TRIANGULUM POLYZONA* Cope

Three specimens are in the collection, two from Potrero Viejo, Veracruz (Nos. 110820–1), and one from Palma Sola, Veracruz (No. 110822). The latter was found in a bromelia; all were collected by Dyfrig McH. Forbes. Ventrals 230, 221, 229, respectively; caudals
